

Hospital Prescription Fast Lane

A faster way for patients and caregivers to request a pharmacy quote, pay, and choose pickup or delivery - without repeated walks across the hospital.

1 km

Approximate distance from the main hospital building

1,000+

Prescription-carrying customers on a normal day

< 10 min

Pilot target for a pharmacy quotation

One QR code. Two channels.

Customers choose the experience already familiar to them.

Open WhatsApp

Both enter one pharmacy work queue.

Turn hospital distance into pharmacy convenience

The pharmacy already has demand. The product removes friction between prescription and fulfilment.

01

Repeated walking

Patients and caregivers may travel between hospital units and the gate pharmacy several times for availability, price, payment, and collection.

02

Uncertain availability

A physical visit does not guarantee every prescribed item is in stock, creating more delay at a stressful moment.

03

Unprepared orders

Even customers who will pick up must wait while staff interpret the prescription, price items, and pack the order.

The proposition

Send prescription -> receive a pharmacist-approved quote -> pay -> pick up a prepared order or request delivery.

LESS WALKING

FASTER SERVICE

One request from prescription to fulfilment

Web and WhatsApp share the same request number, staff queue, safety checks, quote, and fulfilment status.

AI helps. Pharmacy professionals decide.

OCR removes repetitive work, while explicit human gates protect the patient and the pharmacy.

ATTENDANT WORKSPACE

Check every extracted line

The original prescription stays visible while the OCR draft is corrected and confirmed.

ORIGINAL IMAGE

Rx _____

1. Amoxicillin
500 mg TDS x 7

2. Paracetamol
500 mg PRN

Amoxicillin - 500 mg

1 capsule, 3 times daily - 7 days - Qty 21

VERIFIED

Paracetamol - 500 mg

As needed - quantity unclear

REVIEW REQUIRED

SEND FOR PHARMACIST REVIEW - LOCKED

NON-NEGOTIABLE GATES

- 1 **OCR only drafts**
It cannot price, substitute, dispense, charge, or approve.
- 2 **Every line is confirmed**
The attendant must check each line against the image before proceeding.
- 3 **Uncertainty stays visible**
Low-confidence or missing fields remain blocked; unclear images return to the customer.
- 4 **A pharmacist releases the quote**
Prescription validity, medicine mapping, quantities, availability, and alternatives receive clinical review.
- 5 **Corrections are auditable**
Original OCR text, edits, reviewer identity, and timestamps are retained.

Launch a controlled 14-30 day hospital pilot

Start with one pharmacy and one hospital environment, prove the workflow, then integrate deeper into EwaTrade operations.

Pilot scope

- QR landing page with Online and WhatsApp routes
- Prescription photo intake and OCR draft
- Line-by-line attendant verification
- Licensed pharmacist quotation and customer approval
- Payment, prepared pickup, and delivery selection
- General Hospital delivery at NGN 500; other locations quoted separately

200

Completed prescription requests

< 10 min

Median quotation turnaround

50%+

Quote-to-order conversion

95%

Orders ready when promised

0

Safety or privacy incidents

1

Shared pharmacy work queue

Partnership request

Approve a short operational pilot with pharmacy attendants, pharmacists, pickup staff, and dispatch support. EwaTrade supplies the customer flow, request queue, OCR-assisted transcription, quote journey, payment link, and measurement dashboard.
