

# Prescription to fulfilment - without unnecessary movement

A pharmacy-owned digital service powered by EwaTrade.

THE IDEA

# Let customers ask the pharmacy before they travel

Send a prescription. Receive an approved quote. Pay. Choose pickup or eligible delivery.

ONE SIMPLE SERVICE

## ANY APPROVED SOURCE

Works for nearby hospitals, distant approved locations, clinics, doctors, diagnostics, pharmacy channels, caregivers, and repeat customers.

- Fewer unnecessary trips
- Faster answers on price and availability
- Orders can be packed before pickup
- Delivery extends reach where the pharmacy permits
- Every request has a visible status and owner

ENTRY POINT

# Scan once. Choose how to continue.

The QR code opens a page with two clear options.

CONTINUE ONLINE

## WEB

A phone-first guided flow for image upload, contact details, quote status, payment, pickup, and delivery.

CONTINUE ON WHATSAPP

## WHATSAPP

Opens the pharmacy's WhatsApp chat using the same approved messaging service and operating queue.

No app installation is required for the first release.

THE FLOW

# From image to pharmacy-approved quote

Simple outside. Controlled inside.

1

## Send prescription

Photo or PDF plus contact details

2

## OCR creates a draft

Low-confidence text is highlighted

3

## Attendant checks every line

Original image and extracted text are compared

4

## Pharmacist approves

Clarification, alternatives, restrictions, and final quote

5

## Customer decides

Accept, pay, pickup, or choose delivery

AI SAFETY

# OCR helps with typing. It does not make the clinical decision.

Human checks are built into the operating flow.

## 1. MACHINE DRAFT

### OCR

The system reads the image and produces editable text with confidence indicators.

## 2. MANDATORY VERIFICATION

### HUMAN CHECK

The attendant checks the generated result line by line against the original prescription.

## 3. PROFESSIONAL RELEASE

### PHARMACIST

A licensed pharmacist handles ambiguity, alternatives, restrictions, approval, and dispensing controls.

**No raw OCR output becomes a customer quote.**

FULFILMENT

# Pickup or delivery - the customer chooses one

The pharmacy controls price, eligibility, timing, and service area.

PICKUP

## READY BEFORE ARRIVAL

Pay ahead or reserve. The pharmacy packs the order and sends a ready notification with pickup instructions.

1. GENERAL HOSPITAL / CAMPUS

## NGN 500

Initial local-zone example: NGN 500 delivery. Final configuration is agreed with the pharmacy.

2. OTHER LOCATIONS

## CALCULATED / CONFIRMED

Fee is calculated or confirmed based on the approved zone, distance, medicine eligibility, and courier availability.

## WHAT THE PHARMACY GETS

# One operating system for every prescription channel

A shared queue replaces fragmented calls, chats, and manual follow-up.

- QR, web link, WhatsApp, and staff-assisted intake
- OCR draft with line-by-line verification
- Pharmacist clarification and approval queue
- Availability and itemised quotation
- Payment, receipt, cancellation, and refund controls
- Packing, pickup code, and handoff record
- Delivery zones, dispatch, tracking, and proof
- Roles, service timers, notifications, and audit history
- Conversion, turnaround, stock, reliability, and revenue analytics
- Path to POS, inventory, accounting, and EwaTrade integration
-

WHY IT MATTERS

# Better customer experience. Better pharmacy control.

The same workflow can serve one hospital, a city, or approved distant lanes.

CONVERSION

01

Capture demand before it walks away

SPEED

02

Quote and pack before arrival

REACH

03

Offer delivery where the pharmacy approves

CONTROL

04

Know who handled every step

TRUST

05

Keep the pharmacist at the release gate

## PILOT

# Start with a controlled active test

The system is proven with real operations before wider rollout.

- Map the current prescription journey
- Configure pharmacy roles, templates, and service zones
- Train attendants and pharmacist reviewers
- Run a controlled live cohort
- Measure quote-to-paid conversion
- Measure quotation turnaround and ready-on-promise
- Track staff workload and OCR correction
- Require zero safety, privacy, and pharmacy-error incidents
- Agree integrations, commercial terms, and rollout only after the evidence review

PARTNERSHIP

# The pharmacy remains the seller and professional authority

EwaTrade provides the digital workflow, integration path, and operational evidence.

**PHARMACY**

Owns medicine price, clinical review, substitution, dispensing, customer promise, refund authority, and delivery eligibility.

**EWATRADE**

Provides intake, OCR assistance, verification workflow, quotation, ordering, payment orchestration, fulfilment coordination, reporting, training, and support.

## Next step

**Approve a pharmacy discovery workshop and pilot design.**

Regulatory and privacy structure will be confirmed before production launch.
